BENEFITS OF PLASMA CUTTING

- Precision CNC plasma bed can accommodate steel sheets up to 6000mm long by 2400mm wide.
- The plasma cutting unit is a Hypertherm XPR300 and can cut to ISO Range 2 Cut Quality on most applications.
- Cutting and Nitrogen marking can be done on Mild Steel and Stainless steel.
- Plate thickness that can be pierce cut range from 2mm to 40mm.
- Plate thickness that can be sever cut range from 40mm up to 80mm.
- The precision CNC control system delivers dross free, square edge cut quality comparable to laser.

ADVANTAGES OF PLASMA

- Revolutionary technology with laser like performance.
- Faster cutting speeds due to the inverter technology and high achieved amperage.
- Quick setup times on well-engineered cutting bed.
- Consumable life has been doubled through improved alloys and cutting parameters.
- Hypertherm TrueHole technology for bolt ready holes are achievable in plate up to 25mm thick. Generally 1:1 to 2:1 diameter to thickness ratio achievable.
- Most economical technology for cutting of large quantities of plate.

The PlateCut Process

At PlateCut you will receive a quality service from the initial drafting of your project right through to delivery.

Our highly skilled team will be able to take your project from concept to completion no matter the size, whether it is small, large, a one off job or a long term project.

Combined with our fast, economical and precise plasma cutting technology you can count on your projects being completed on time, every time.

GET TO KNOW OUR COMPANY

PlateCut is part of the NEACH group of companies, and was established to service the growing market for processed plate steel products.

PlateCut runs the latest Hypertherm high definition plasma cutting technology to ensure all the customers and projects we supply receive the highest grades of quality cutting available to the current market. PlateCut are ISO accredited and can provide all material certification and quality documentation needed to meet the highest specifications.

HIGHLY EXPERIENCED TEAM

Our PlateCut have a dedicated programmer, estimator and operator to ensure all our customers are provided a fast, high quality and reliable service. A full range of standard mild steel plate is always stocked to meet the needs of our customers.

BEST PRACTICE

PlateCut are proud to have achieved sustainable and planned growth enabling us to progressively expand our team, service offerings and expertise.

PlateCut provides its clients with industry leading vertically integrated services that are third party certified to the following standards:

- AS 4801 for safety
- ISO 9001 for quality
- ISO 14001 for the environment

PlateCut are committed to Industry Best Practice and strive to continuously improve its services. As a service provider, our systems form the backbone of the company and have continued to support our growth over time. These systems are what set us apart from our competitors.

PlateCut's company culture is centred on continual evolution and improvement. A track record of success which spans 40 years means you are dealing with a company that offers reliability above anything else.

OUR PARENT COMPANY

Established in 1975, NEACH is one of Australia's longest running steel fabricators, specialising in structural steel fabrication, metalwork, abrasive blasting and surface treatment services. NEACH pride ourselves on our success and ability to 'Collaborate, Innovate and Create' with our valued clientele.
